

## Generate finished CAD designs from your CPQ software

### DA (Design Automation)

Configure to Order manufacturers often utilize CPQ (Configure, Price Quote) solutions to aid in their upfront sales process. However, once the sale is made, the engineering team often needs to generate finished manufacturable designs from the customer's configuration in their preferred CAD software. This process can be error-prone, time-consuming, and increase the lead time to the end customer.

CADTALK DA (Design Automation) integrates CPQ solutions to preferred CAD solutions so Configure to Order manufacturers can generate designs automatically that are ready to release to the shop floor in minutes instead of hours and days.

Connect product configurators to your engineering design software to produce manufacturing-ready models for production

### Key Benefits

- *Faster engineering to production hand-off (80% faster on average)*
- *Reduce purchasing mistakes*
- *Automatic creation of new inventory records and stock codes*
- *Rules-based manufacturing routing creation*
- *Implement in about 8 hours*
- *Does not require additional CAD or ERP user licenses*
- *ROI typically in first 3 months*

### Key Features

- *Decreases lead time to end customer which translates to a competitive advantage*
- *Eliminates the tedious and time-consuming work of translating CPQ requirements into CAD configuration parameters*
- *Drastically improves the consistency and accuracy of the final design through automation*
