SUSTAINABILITY in Manufacturing

databases directly

into your CAD/PLM.

CADTALK

HOW?

We facilitate creating a single source of truth, enabling data to flow seamlessly from design to end-of-life. Your CAD data can inform your PLM data which can in turn inform your ERP data. This ultimately creates a sustainability feedback loop as your ERP informs future designs.

Minimize over-ordering and scrap with accurate and consistent BOM data. Use your ERP to track actual material consumption and waste generation. design-for-disassembly information while your ERP manages returns and refurbishment. Integration between the two facilitates material optimization for reuse and recycling.
